

Kimmo
World-Class Industrial Packaging

Our vision is to be the **preferred partner to clients** in our industry, by **designing fit-for-purpose packaging solutions** that contribute to the long-term benefit of all involved.

Who We Are

Kimmo is a **heavy-duty packaging manufacturer** for the industrial sector.

We provide **specialist packaging solutions** that reduce our customers' total costs and minimise their environmental impact.

Kimmo was originally founded in 2006 and has since grown to become a leading industrial packaging provider.

We believe we have retained **our original core values** through every phase of our development, working in partnership with our clients to offer them superior solutions.

As **experienced custom packaging providers**, we have brought together the perfect blend of **excellent quality and forward-thinking experimentation**, to find unique and effective answers to modern-day bulk packaging needs.

What We Do

We use **innovation as a tool** to revolutionise the way things are done in the bulk transport packaging industry.

With our **multi-material engineering capabilities**, we select and combine packaging materials to build the most appropriate solution to meet our customers' specific requirements.

How We Add Value

We cultivate lasting relationships with our clients and become trusted partners, working together towards lasting solutions.

We focus on a fit-for-purpose approach, and we prioritise sustainability and cost-effectiveness.

Kimmo aims to help customers reduce their costs, manage risk and limit their impact on the environment. We do this through our skills in innovation, design and manufacturing. We analyse every point where packaging interacts with a client's supply chain, and work out how this can be optimised.

What Drives Us

Innovation

We combine our **state-of-the-art manufacturing capabilities with out-of-the-box thinking**, to provide every client with an optimal solution.

Sustainability

We look for ways to **minimise waste and reduce our clients' carbon footprint**, helping to make the industry greener one step at a time.

Respect

We bring respect to every part of our operation. This includes respect for our colleagues, our clients, the authorities, industry standards and certifications, and the environment.

Total Cost Approach

We help customers to **optimise the supply chain and reduce the total cost of operations**, with smarter and more cost-effective packaging solutions.

Proudly South African

All Kimmo packaging products and accessories are **manufactured locally**, and **85% of our raw material is sourced from within South Africa.** Our aim is to make a **significant difference in the lives of all our employees, and those of the community surrounding our factory in City Deep.**

Custom Multi-Material Packaging Solutions

Each packaging solution from Kimmo is tailored to meet the client's specific requirements.

We analyse the transportation model, warehousing constraints and industry requirements, to create premium packaging that is eco-friendly and cost-effective.

We will work with **corrugated fibreboard, honeycomb fibreboard, plywood**, or a **combination of two or more materials** to manufacture the optimum packaging for each customer's supply chain

Here is an example of a multi-material packaging solution for road freight:

- A honeycomb lid with plywood insert.
- Honeycomb sides with octagon plywood insert to accommodate a Fibre IBC from our preferred supplier
- Integrated honeycomb base with plywood insert

Affordable Packaging with our Total Cost Approach

Our total cost approach help you **optimise your supply chain and reduce the total cost of your operations**, with smarter packaging solutions.

Our Materials

Corrugated Fibreboard

- Also known as corrugated cardboard.
- Made from cellulose fibres, usually a mix of virgin & recycled fibres.
- Extremely lightweight material.
- Kimmo uses double-walled corrugated sheets comprising of 3 liners separated by 2 layers of fluting.

Honeycomb Fibreboard

- Hexagonal inner cellulose structure sandwiched between specially treated boards.
- Takes its name from the visual resemblance to a bee's honeycomb.
- Lightweight but very durable.
- Kimmo specialises in the use of honeycomb fibreboard.

Plywood

- Man-made material manufactured from thin layers of wood.
- A lightweight, durable material.
- The layers are glued together with adjacent layers, with the wood grain rotated up to 90° to one another (known as cross-graining).
- Cross-graining improves strength and creates durable packaging products.

Sustainability at Kimmo

Sustainability is a vital part of our operations. We aim to attract customers who share our values and treat their environment with respect. With the three pillars of sustainability in place as part of Kimmo's operations, we aim to create wealth for all parties involved while encouraging social progress and minimising our ecological footprint. **Our approach covers:**

Our business

Providing state-of-the-art, recyclable packaging from a sustainable source.

Our people

Ensuring the safety, wellbeing and development of our employees, and contributing to the communities in which Kimmo operates.

Our Environment

Minimising our impact from design to production, supply to recycling.

We believe that environmentally friendly packaging should be the norm, not the exception, and we enjoy seeing how our clients reap the rewards of our green approach

Corporate Responsibility

At Kimmo, we value our employees and the contribution they make to the continued growth of our business. We are a proudly South African company, committed to building a thriving local economy by creating both direct and indirect jobs through the manufacture of our products.

We are an equal opportunity employer and we aim to upskill our team through regular training within a non-discriminatory culture

The safety of all employees, contractors and visitors is our top priority and an **important part of being a responsible business.**
